ABOUT

Product-minded engineer with 8+ years of experience building and scaling platforms across cybersecurity, fintech, and crypto. Proven ability to lead teams, ship core product features, and operate at the intersection of security and AI. Track record spanning high-growth startups including Revolut, MoonPay, and Corgea.

EXPERIENCE

Corgea — Technical Solutions Engineer

Mar 2025 – Present

- AI-native cybersecurity platform that autonomously finds, triages, and fixes insecure code
- Bridging engineering and customer-facing workflows to deploy AI-driven security solutions at scale

Python

TypeScript

AI / LLMs

Application Security

Stealth Startup — Blockchain Product Engineer

Mar 2025 – Feb 2026

- Built the backend API for a trading platform on top of Hyperliquid, supporting core trading flows with a focus on reliability and execution

TypeScript

Node.js

Golang

Hyperliquid

Blockchain

epilot GmbH — Senior Software Engineer

Mar 2023 – Mar 2025

- Led a team of 5 engineers while delivering stability improvements across the platform
- Built the core feature for the internal email system to trigger automated workflows
- Energy-sector SaaS platform digitising sales and operations for utility companies

TypeScript

AWS

Kubernetes

Node.js

MoonPay — Senior Software Engineer

Mar 2022 – Jan 2023

- Built the backend API powering the MoonPay Wallet app, enabling crypto on-ramping for thousands of users
- Scaled payment infrastructure powering crypto on-ramps and off-ramps for millions of transactions

TypeScript

Node.js

AWS

Blockchain

Revolut — Senior Software Engineer

Nov 2021 – Mar 2022

- Built and maintained the internal risk and fraud detection platform at one of Europe's largest neobanks
- Engineered backend systems to identify and mitigate fraudulent transactions at scale

Java

Kubernetes

Microservices

AWS

argyle

Argyle — Reverse Software Engineer

2020 – 2021

- Reverse-engineered applications and online platforms to extract structured employment and income data
- Built data extraction pipelines powering Argyle's employment verification connectivity layer

Python

TypeScript

AWS

CHASER

Chaser — Software Engineer

Oct 2018 – Sep 2020

- Developed features for accounts receivable automation platform helping businesses get paid faster
- Built integrations with accounting software to streamline credit management workflows

Python

JavaScript

PostgreSQL

NewStore — Software Engineer

2017 – 2018

- Contributed to omnichannel retail platform enabling mobile-first store operations
- Built backend services supporting inventory management and order fulfilment

Python AWS Microservices

Apify — Web Automation Engineer

2016 – 2017

- Built web scraping and automation tools on the Apify cloud platform
- Created public actors including a BigQuery integration used by the community

JavaScript Node.js Web Scraping

Sygris — Software Developer

2015 – 2016

- Early-career role building web applications and business tooling

JavaScript Python SQL

SIDE PROJECTS

Sentinel

Security controls for production AI agents — pattern-matching firewall that inspects and filters agent actions in real time.

Inconnu

Zero-trust security layer for RAG systems — validates, sanitises, and controls data flowing through retrieval-augmented generation pipelines.

Fredirect

URL intelligence tool that tracks and analyses redirect chains to detect harmful or spoofed links, protecting against online impersonation.

SKILLS & TECHNOLOGIES

Languages	Python, TypeScript, JavaScript, Rust, Go, Shell
Cloud	AWS, Vercel, Kubernetes, Docker, Microservices, Fly.io
Domains	Application Security, AI/ML, Payment Infrastructure, Blockchain, Web Automation
Other tools	PostgreSQL, MongoDB, Convex, Git, CI/CD, LLMs

LANGUAGES

Spanish — Native **English** — Fluent **French** — Fluent

WRITING

Author of a product engineering newsletter exploring decisions, trade-offs, and lessons in building software. Featured series: *Hard Decisions*. [Oxjgv.space](#)
